Praxtour Course

as if you are really there

Praxtour Course is the ideal bike for cyclists who do not shy away from challenges. Combined with the VirtuReal Cycling 2.0 software it offers a very realistic cycling experience. The bike was designed according to the dimensions and appearance of a road bike. You can switch gears just like on a road bike with Praxtour's electronic shifters. Your own pedalling speed determines the playback speed of the route movie, in which the resistance during climbs is automatically felt (= active resistance). The Praxtour Course is delivered in 2 versions: with or without its PowerConsole, PC and 24" touch monitor. The default route movies that comes with it, includes a.o. the climbs of Alpe d'Huez and Mont Ventoux! Also included extensive Test- & Training options.

praxtour®

the VirtuReal Cycling company

Praxtour Course + PowerConsole
