PraxFilm

Encouraging exercise for the elderly

PraxFilm is a unique software package that lets you cycle in a virtual world on any training device with cranks and pedals. With PraxFilm we offer the possibility to easily combine films with existing (or new) training equipment e.g. a MOTOmed. Any equipment with pedals is suitable for PraxFilm. A sensor is installed on a pedal and the ANT+ receiver is plugged into the computer. You can start the film with 3 easy steps via a touch screen or a mouse. It doesn't get any simpler. The film is played based on the speed of the pedal rotations, and the users are encouraged to exercise.

praxtour®

the VirtuReal Cycling company

Included:
- PraxFilm software;
- 20 films;
- Cadence sensor and ANT+ USB stick;
- 24" or 27" touchscreen or 43" TV screen;
