Praxtour Cruise Compact

indoor cycling can be so much more fun

The **Praxtour Cruise Compact** is ideal for any recreational cyclist. Combined with the VirtuReal Cycling 2.0 software, it offers a very realistic cycling experience. No more dull gray walls, but beautiful route films! By pedalling faster or slower you determine the playback speed of the route film. The resistance on climbs is automatically adjusted (= active resistance). You can switch gears using the handy dial, just like on a real bike. The low entry and comfortable seat position characterize this bike. The Praxtour Cruise Compact is delivered with integrated console.

The enclosed route films contain several, mainly easy routes, such as along Lake Iseo in Italy and along the Moselle in Germany. Furthermore, extensive Test- & Training options are also included.

praxtour®

the VirtuReal Cycling company
